

KEMISPECTR

READ THE COLORIMETRIC CURVE AND FORMULATE THE COLOR WITH A CLICK!

The complete spectrophotometer package, formulation software and notebook, offers equivalent performance to the best laboratory systems with significant cost savings.

Thanks to the colorimetric technology, it is made available to the customer a simple, reliable and precise formulation system with the YS3010 smart portable **spectrophotometer**

which is able to detect color and send the colorimetric curve to the formulation software.

It can also be used to identify the color difference between two readings, comparing the differences in terms of "ΔE" with the possibility of memorizing the readings, thanks to the simple and intuitive graphics of the 3.5" touch-screen LCD display.

The CWD formulation **software** allows the reading and formulation of the detected sample; in a single screen shows all the functions for the formulation, automatic correction and storage of data, with supporting graphics and printouts.

It has been designed to achieve maximum precision through a last generation technology, which allows resales to reach tinting perfection levels required by professional laboratories.

The supplied **notebook** PC is an HP with i5 processor 7200U CPU 2.5GHz and 8GB RAM, Windows 10 Pro 64bit operating system.
